PVC

PVC can withstand a certain amount of mechanical loading, but can only protect edges against light impacts. Coloured profiles are resistant to UV radiation under normal circumstance, but constant exposure may lead to fading in places. Not susceptible to dilute acids and alkalis, chlorinated water. Resistant to fungus and bacteria.

Note

The suitability for use in terms of mechanical and chemical resistance must always be checked in each individual case. When installing and grouting our metal profiles, the adhesive and grouting materials must be removed immediately with clean water and a soft sponge to prevent damage due to corrosion of the profile. Do not use acidic (e.g. cement fog remover) or alkaline cleaning agents in combination with all metal profiles. Clean with clean water and wipe with a dry linen cloth.
